

Thank you to all The Society for organizing this course and willingness to share your knowledge/time w/ the future generation of physicians. This course has been invaluable and I urge you all to continue.

This was a great course! Thank you for all the valuable insights and clinical correlates

This is one of the few meetings I have attended in the last decade that has made me want to read more about the topics discussed.

Ally

Thank you for sharing your knowledge and experience.

- Super interesting
- ++ double format LECTURES
- WORKSHOPS
- ~~I~~ strongly recommend this course, maybe for colleagues with a basic anatomical background.
- ~~It would be~~
It would be great to have similar formats like this one for other courses!
- management complications
- others

- Awareness of care and faculty
- would give more room to the workshops
- insert a practical part
- more room to the venous system anatomy

What do I think about the course (WFITN Neuroanatomy 2022)

I love the course!

This is a course appropriate for neurointervention fellows, who have the basic knowledge of neurovascular anatomy. The course structure is great, with the lectures in the morning and the case discussions in the afternoon.

It would be great if the reading material before the course is provided [^] (apart from the webbased material) infiles

Thank you the faculty & organizers for creating the great learning environment, though provoking discussion, and amicable interactions, encouraging students to engage in the questioning & discussion.

The coffee break & lunch is great. Love the donuts & bagels. I would suggest alternating the lunch to some other choices though. (not only sandwiches & salads)

I would suggest having an alarm/dock for the presenter/discussion for better time control.

For the lectures, they are well-structured and very practical.

Would love to participate in the part 2 again!

Thank you very much!

Tanayam J. (June)

Exceptionally valuable neuro-anatomic content
but can be overwhelming detail at times.

Perhaps the lecturers can indicate/highlight
key/common ~~to~~ clinical anatomic correlations
during the ~~the~~ didactics with particular regard
to anatomy they wish they had known better
as fellows early in career.

The course is simply Excellent.

The diversity of faculty experiences
wonderful venue..

good balance between basic
science and clinical material.

Dr. Soderman was strict. 😊

WFITN Course evaluation

Overall organization is excellent. I think for some of the talks, some more treatment related points would be good. I understand ~~the~~ the desire to avoid long digressions into technique/treatment, but some more practical demonstrations of the implications of the anatomy on ~~the~~ treatment would be welcome.

WFITN NEUROANATOMY COURSE 2022

Probably the best course I've ever attended.

It has been an honour for me to listen such brilliant speakers and lecturers.

I'll see you again in 3-4 yrs because you will ever learn something.

Thank you

Chicago, 27-5-2022

All Course Faculties were superb,
I liked the concept of workshops
following the Didacts - Course design is very
Good.

It had ~~everything~~ for something for all
from beginner to skilled

Rajnish
Dr RAJNISH KUMAR
ARORA

The MOST fun ^{the study of} the study of
Neurovascular anatomy has ever
been.

It has been a true honor to join
the generators of excellent Clinician Scientists
pioneering our understanding of the brain.

- Nathan Finkas

Thank you for this wonderful opportunity to learn
the most basic & crucial part of Neurointerventional
procedures.

Great training course for many
fundamentally important aspects of
Cerebral & Spinal Neurovascular Anatomy
and knowledge!

Wonderful faculty and great
presentations / discussions.

Definitely hereafter for my practice.
Learned a lot!

Thank you all!

Dr. Tony White

★

Great program!

pay for spinal arterial anatomy is
the BEST DAY.

workshops ~~day~~ > Lectures

Shorter lectures
w/ emphasis on
select concepts. > general lectures

As a current Neurology resident, this course is a
little advanced for me but found it very useful.

The 3D sessions and workshops were the most helpful.

Some lectures were better than others in terms of
simplifying difficult concepts. Overall I highly appreciated
being taught by world renowned professors who are leaders
in their fields.

WFITN Neurovascular Anatomy Course 2022

I'm really happy with the experience of being part of this wonderful course, I think that the quality of the talks was amazing. The workshops make me nervous at the beginning but with the days I really enjoy them.

This course has motivated me a lot to improve myself and try to study way more harder than before.

I will totally recommend this course. Thanks!
